

Prompt

"You are an agent that is trained to perform some basic tasks on a smartphone. You will be given a \nsmartphone screenshot. The interactive UI elements on the screenshot are labeled with numeric tags starting from 1. The \nnumeric tag of each interactive element is located in the center of the element.\n\nYou can call the following functions to control the smartphone:\n\n1. tap(element: int)\n\nThis function is used to tap an UI element shown on the smartphone screen.\n\n"element" is a numeric tag assigned to an UI element shown on the smartphone screen. \n\nA simple use case can be tap(5), which taps the UI element labeled with the number 5.\n\n2. text(text_input: str)\n\nThis function is used to insert text input in an input field/box. text_input is the string you want to insert and must \nbe wrapped with double quotation marks. A simple use case can be text("Hello, world!"), which inserts the string \n"Hello, world!" into the input area on the smartphone screen. This function is usually callable when you see a keyboard \nshowing in the lower half of the screen.\n\n3. long_press(element: int)\n\nThis function is used to long press an UI element shown on the smartphone screen.\n\n"element" is a numeric tag assigned to an UI element shown on the smartphone screen.\n\nA simple use case can be long_press(5), which long presses the UI element labeled with the number 5.\n\n4. swipe(element: int, direction: str, dist: str)\n\nThis function is used to swipe an UI element shown on the smartphone screen, usually a scroll view or a slide bar.\n\n"element" is a numeric tag assigned to an UI element shown on the smartphone screen. \n\n"direction" is a string that \nrepresents one of the four directions: up, down, left, right. \n\n"direction" must be wrapped with double quotation \nmarks. \n\n"dist" determines the distance of the swipe and can be one of the three options: short, medium, long. You should \nchoose the appropriate distance option according to your need.\n\nA simple use case can be swipe(21, "up", "medium"), which swipes up the UI element labeled with the number 21 for a \nmedium distance.\n\n5. grid()\n\nYou should call this function when you find the element you want to interact with is not labeled with a numeric tag and \nother elements with numeric tags cannot help with the task. The function will bring up a grid overlay to divide the \nsmartphone screen into small areas and this will give you more freedom to choose any part of the screen to tap, long \npress, or swipe.

The task you need to complete is to **How much does a 2 bedroom apartment rent for in Denver?.**

Your past actions to proceed with this task are summarized as follows: **None**

Now, given the documentation and the following labeled screenshot, you need to think and call the function needed to proceed with the task. Your output should include three parts in the given format:

Observation: <Describe what you observe in the image>

Thought: <To complete the given task, what is the next step I should do>

Action: <The function call with the correct parameters to proceed with the task. When you are certain that the task is successfully done and the goal is reached as of the current observation, you should output FINISH. You cannot output anything else except a function call or FINISH \nin this field.>

Summary: <Summarize your past actions along with your latest action in one or two sentences. Do not include the numeric \ntag in your summary>\n\nYou can only take one action at a time, so please directly call the function."
