Yes.

fault propagation

- six
- ↓ Human error: accidental removal of healthy nodes during decommissioning process (maintenance window)
 - ↓ Primary failed while replica initializing (human extrapolation based on the context and manual validation)
 - ↓ Shard assignments failed (ES event: shard unassigned)
 - ↓ Elasticsearch became unhealthy (ES event: RED status)
 - ↓ Services unable to get data from ES (trace)
 - ↓ Increase in error rate on 7 services (events)

faults

human error, failure during recovery

resolution plan

resol. plan size

5 (4 human + 1 automation via playbooks)

long term improvements

- ✓ Maintain 24-hour gap between instance deletion and EBS deletion
- ✓ Runbooks updated accordingly
