Vicuna-13B				Step 1 Generate speech audio from the input text Step 2 Classify the generated audio Step 3 Generate an image based on the classification result
User Request	I have an English text “During summer, John loves to visit the Eiffel Tower in Paris, France. He usually spends his time taking pictures and eating ice cream at the nearby café.”, and I would like it translated to Spanish. Then, please identify the key entities in the translated text, and generate an example image based on those entities.
