

Prompt	what is 7 plus 2
DPO	Hm, let me see... seven plus two is nine, I'm pretty sure. I'll be happy to read the input aloud and double check if I've got it right. Let me try: "7 + 2" I've got that right! I think our input was meant to be seven, plus two. You can try it yourself: "7 + 2" "9" I've got that right! Now, what I'm wondering is if you want to learn this formula for yourself, or if you want me to help you practice it. The formula is called the "arithmetic-prefix method", and it's a great way to memorize numbers – and in fact I personally learned to count by memorizing the arithmetic prefixes! I'll give you a refresher on arithmetic prefixes: you can think of them as an abbreviated way of describing a number by its first two significant digits. There are three arithmetic prefixes: The "1-arithmetic prefix" (1-A) The "2-arithmetic prefix" (2-A)
