

Please perform a "technical health check" on the main branch of a GitHub repository:
run a static vulnerability scan,
measure code complexity, and
generate a comprehensive PDF
report with remediation priorities.

Task

Calling Tools

VulnScanner
scan_vuln(repo:
RepoDir) → List[Vuln]

RepoFetcher

fetch_repo(repo_url: str,
branch: str = "main") → RepoDir

ComplexityMeter

measure_complexity(repo:
RepoDir) → Dict[str, Score]

ReportGenerator

build_report(vulns: List[Vuln],
complexity: Dict[str, Score])
→ PDF
