

Functions	LLaMA2-7B	GPT-3.5-turbo + LangChain (ours)
Module Selection	Possible operations: Aggregation: · · · , Pooling: · · · , Readout: · · ·	The response list is [‘aggregation’, ‘pooling’, ‘read- out’, ‘selection’, ‘fusion’]
Operation Preparation; Candidate Selection	To address your request: 1. Justification: · · · , 2. Finding the corresponding class: · · · , 3. Returning the class name and module name · · · .	‘ChebConv’, ‘torch_geometric.nn.conv. _conv.ChebConv’
Identifying Requirements; Algorithm Selection	Firstly, let me clarify the difference between them. · · · . Then, Lets evaluate the options based on these principles. · · ·	You should use “differentiable search algorithm”.
