

Question: How many academic works **referenced** the paper "Model of experts for decision support in the diagnosis of leukemia patients"?

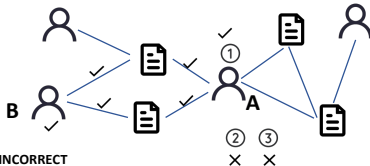

- 1. The question is asking for the number of academic works that referenced a specific paper. We need to find the paper node in the graph.
- 2. RetrieveNode[Model of experts for decision support in the diagnosis of leukemia patients]
- 3. The ID of this retrieval target node is p-987.
- 4. The question is asking for the number of academic works that referenced the paper "Model of experts for decision support in the diagnosis of leukemia patients". We need to calculate the "reference" neighbor degree of this paper node.
- 5. NodeDegree[p-987, **reference**]
- 6. The reference neighbor node degree of p-987 are: 45.
- 7. The number of academic works that referenced the paper "Model of experts for decision support in the diagnosis of leukemia patients" is 45.
- 8. Finish[45]

Answer is **INCORRECT**
Correct answer: 73

Question: Who is the **closest collaborator** with author A? Closeness is defined in terms of the number of collaboration together.

- 1. The question is asking for the closest collaborator of author A. We need to find the author node corresponding to A in the graph.
- 2. RetrieveNode[A]
- 3. The ID of this retrieval target node is a-675.
- 4. The question is asking for the closest collaborator of author A. We need to calculate the "author" neighbor degree of this node to find the collaborators.
- 5. NodeDegree[a-675, **author**]
- 6. The node or neighbor type does not exist in the graph. This might because your given neighbor type is not correct. Please modify it.
- 7. In order to find the closest collaborator of author A, we need to check the neighbors of the author node. However, it seems that the neighbor type "author" does not exist in the graph.
- 8. NeighbourCheck[a-675, **author**]
- 9. The node or neighbor type does not exist in the graph. This might because your given neighbor type is not correct. Please modify it.
- 10. It seems that there is an issue with the graph structure or the given neighbor type.
- 11. Finish[Unable to retrieve closest collaborator]

Answer is **INCORRECT**
Correct answer: B

Figure 5: Failure cases of GRAPH-COT. The key information in the question and the wrong interaction of GRAPH-COT are colored in **red**. The author names in the second example are anonymized as A & B.
