

-Goal-

Given a text document that is potentially relevant to this activity and a list of entity types, identify all entities of those types from the text and all relationships among the identified entities.

-Steps-

1. Identify all entities. For each identified entity, extract the following information:

- **entity_name**: Name of the entity, capitalized
- **entity_type**: One of the following types: [organization, person, geo, event]
- **entity_description**: Comprehensive description of the entity's attributes and activities

Format each entity as ("entity"<|><entity_name><|><entity_type><|><entity_description>)

2. From the entities identified in step 1, identify all pairs of (source_entity, target_entity) that are *clearly related* to each other.

For each pair of related entities, extract the following information:

- **source_entity**: name of the source entity, as identified in step 1
- **target_entity**: name of the target entity, as identified in step 1
- **relationship_description**: explanation as to why you think the source entity and the target entity are related to each other
- **relationship_strength**: a numeric score indicating strength of the relationship between the source entity and target entity
- **relationship_keywords**: one or more high-level key words that summarize the overarching nature of the relationship, focusing on concepts or themes rather than specific details

Format each relationship as ("relationship"<|><source_entity><|><target_entity><|><relationship_description><|><relationship_keywords><|><relationship_strength>)

3. Identify high-level key words that summarize the main concepts, themes, or topics of the entire text. These should capture the overarching ideas present in the document.

Format the content-level key words as ("content_keywords"<|><high_level_keywords>)

4. Return output in English as a single list of all the entities and relationships identified in steps 1 and 2. Use ** as the list delimiter.**

5. When finished, output <|COMPLETE|>

-Real Data-

Entity_types: {entity_types}

Text: {input_text}

Output:

Graph Construct Prompt
