

Prompt C.1: Synthetic Trajectory Generation (ALFWorld)

You are an expert agent in the ALFRED embodied environment. You will be given a task and relevant skills to apply. Your goal is to generate a successful trajectory that demonstrates proper use of these skills.

You should generate a step-by-step trajectory that:

1. Uses the provided skills appropriately;
2. Takes realistic actions in the environment;
3. Completes the task successfully;
4. Demonstrates good planning and systematic exploration.

For each step, you should:

- Think through the current situation using `<think></think>` tags.
- Choose an appropriate action using `<action></action>` tags.
- The action should be a simple command like "go to cabinet 1", "open drawer 2", "take apple 1", "put apple 1 in/on countertop 1".

Generate a complete trajectory from start to finish. Stop when the task is complete.
