

Step 1: Scans the system

Tool call: `kubectl get pods -n astronomy-shop`

Observation: *All pods Running; no crash signal*

Step 2: Inspect low memory

Tool call: `kubectl get product-catalog`

Observation: *Suspicious 20MiB memory limit*

Step 3: Patch product-catalog service

Tool call: `kubectl set product-catalog`

Observation: *CART_ADDR still unchecked*

...

Outcome: Failed

Fixates on the low-memory noise;
environment variable stays missing

Step 1: Check cart traces

Tool call: `get traces('/api/cart')`

Observation: *Cart calls fail while pods heal*

Step 2: Inspect frontend env.

Tool call: `kubectl get frontend`

Observation: *CART_ADDR missing*

Step 3: Restore CART_ADDR

Tool call: `kubectl set env CART_ADDR=:8080`

Observation: *Services recover*

...

Outcome: Success

Restores missing CART_ADDR on
frontend service
