

Fault/noise injectors

The diagram illustrates the components of fault and noise injectors. A central box labeled 'Fault/noise injectors' branches into two main categories: 'Fault simulation' and 'Noise'. Under 'Fault simulation', there are four sub-categories: 'HW Faults' (orange), 'Code Bugs' (blue), 'Bad Ops' (green), and 'Misconfigs' (purple). Under 'Noise', there is a single sub-category: 'Modeling' (grey). The boxes are arranged in a hierarchical structure with lines connecting them.

HW Faults

Code Bugs

Bad Ops

Misconfigs

Fault simulation

Modeling
