

Instruction: This is a knowledge graph completion task, which needs to predict the tail entity for an incomplete query triplet.

Input: The query triplet is $(h, r, ?)$.

The quantized representation of entity h is: $[\text{Code}(h)]$

The answer candidates and corresponding quantized representations are as follows:

entity 1, $[\text{Code}(\textit{entity 1})]$

...

entity 20, $[\text{Code}(\textit{entity 20})]$

Please generate quantized representations of the top-3 potential answers, ranked from highest to lowest:

Output: 1. $[\text{Code}(\textit{candidate 1})]$

2. $[\text{Code}(\textit{candidate 2})]$

3. $[\text{Code}(\textit{candidate 3})]$
